

Terminology

Admin	A user of the client's access (casino), login, password (Unique within the platform)
Game parameters	Data needed for correct launch and operation of the casino games (for example denomination, coin value, currency, language, RTP config)
Group of Banks (Agent)	<p>A Group of Banks (Agent is an alternative name) is a form of accounting within a platform regarding a specific casino. The platform also allows you to set up the games individually for every group of banks. (For example, 1 group of banks = 1 currency)</p> <p>Players are unique and strictly tied to the same group of banks. If you need to give the player an opportunity to play in several groups of banks, you have to create copies of the player in every group of banks.</p>
Player's game actions	Player's bets in any game of the platform
Player's non-game actions	Deposit, withdrawal of funds from the player's balance within the platform from without in case of wallet integration. (In case of seamless integration the account is taken on the part of the external web-site.)
Player	The final user of the system. He is unique within the casino system and is tied to his group of banks.
Spin	Single player's game action. Terminology is taken from the main part of the casino slot games.
The screen layout of the slot-machine	Symbols (arrangement of the symbols) on the screen of the slot machine when the reels are sloped after the spin.
Playing state of the game	The current state (feature) of the game is applied to the slot-machines. The rule is to distinguish the following playing states: standard (base), free (freegame, respin feature), bonus (bonus feature), double (double feature)
Provider, games section, brand	Grouping of the total game set according to the original brand.
Back office, admin panel	The administrative interface of the platform
Default settings	The term means that the settings will be automatically applied to a new group of banks (as a rule, we are talking about the settings of the game, the jackpot game settings)
Limit of the game's bank	The special mode of control of the game's return where each potential gain

	compares to the current financial state of the game.
Limit of the maxwin	The special mode which limits the win by the set value
RTP	RTP - Return to player
string id	The main identifying object of the platform.
Player's id	<p>There are several identifying objects of the player - id:</p> <ul style="list-style-type: none"> - player's name (player) - player's username - internal identifying object. It's the main on the platform's part. - external identifying object. It coincides with the identifying object of the web-site
session	a session of the interaction of one player of one group of banks of one casino with one game launched with one set of launch parameters, which stores information about each game and non-game action (the second is optional, relevant only in the presence of this action specifically in the game)
Game limitation modes	A special game mode which limits return set by the developer. The platform provides 2 modes: bank and maxwin (see page 13).
Delta	Difference

explanation of the numbers from the screenshot:

- 1) games tab
- 2) games tab: a game set
- 3) filters to search for games type, brand, format
- 4) on/off turning games on and off

Games settings.

patches are multi-level templates for configuring games.

there are 4 levels of patches

1) default — system patch, unchangeable

2) currency — by default, the patch is configured for a specific currency, which you can change at will so that all Bank groups in this currency are automatically configured depending on your wishes. but it is better to use an alternative patch for customization for your convenience and clarity.

3) alternative — recommended patch, you can present this patch as a template for your agent's settings, depending on your requests. when you apply this template to Bank groups they automatically accept your own unique alternative patch settings instead of the default currency settings.

4) Agency — if you imagine patches as a pyramid, this is the highest level of settings that overlaps all the previous ones. it allows you to configure each game directly for each agent (Bank group) individually.

Default patches.

this is a page with technical information nothing can be changed here <http://joxi.ru/MAjNXZGTjNEGLA>

The screenshot shows the Admin Panel interface for SmartAdmin. The top navigation bar has tabs for Home, Games, Agents, History, and Reports. The Games tab is highlighted with a red arrow labeled 1. Below the navigation is a sub-menu with tabs for Games Set, Games Settings, Currency Patches, and Alternative Patches. The Games Settings tab is highlighted with a red arrow labeled 2. A third red arrow labeled 3 points to the 'Default Patches' tab, which is currently selected. The main content area displays a table with one entry: ID 984, String ID base, Name base, and Actions. At the bottom right of the table are buttons for First, Previous, Next, and Last.

Currency patches.

Here you can see what the patch settings for each existing currency look like. we do not recommend changing these patches, but for your convenience, we suggest that you work directly with the following patch type - an alternative patch.

<http://joxi.ru/V2VIVEaidIMzPr>

The screenshot shows the Admin Panel interface for SmartAdmin. The top navigation bar has tabs for Home, Games, Agents, History, and Reports. The Games tab is highlighted with a red arrow labeled 1. Below the navigation is a sub-menu with tabs for Games Set, Games Settings, Currency Patches, and Alternative Patches. The Currency Patches tab is highlighted with a red arrow labeled 2. A third red arrow labeled 3 points to the 'Details' button for the first row in the table. The table lists various currency patches with their details: ID, String ID, Name, Currency, and Actions. Each row has a 'Details' button in the Actions column, which is highlighted with a red arrow labeled 4.

When you click on the number 4 from the previous screenshot on the "details" button, you go to the patch editing menu. but we will pass to the consideration of mass settings of games and to changing patch settings later.

825	super7reels_mk_html	95RTP	0.01 0.02 0.05 0.1 0.2 0.5 1.2.5	Empty	de	100	ON (highlighted with a red arrow 14)	OFF (highlighted with a red arrow 10)	OFF (highlighted with a red arrow 11)	ON (highlighted with a red arrow 12)	ON (highlighted with a red arrow 13)	1000.00	Empty
824	risingliner_mk_html	95RTP	0.01 0.02 0.05 0.1 0.2 0.5 1.2.5	Empty	de	100	ON (highlighted with a red arrow 14)	OFF (highlighted with a red arrow 10)	OFF (highlighted with a red arrow 11)	ON (highlighted with a red arrow 12)	ON (highlighted with a red arrow 13)	1000.00	Empty

explanation of the numbers from the screenshot:

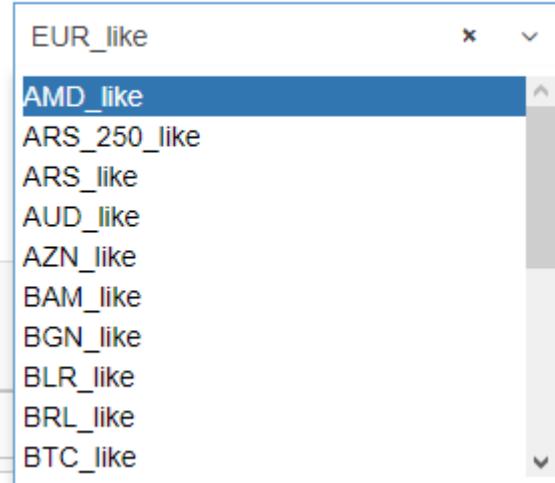

- 3) Mode - visible or not visible for use in the next "agents" tab
- 4) RTP - it's short for Return to Player, which translates to "payout percentage". This value indicates a theoretical refund based on the bets placed by the player for a certain number of rounds. you can choose one of the three options.

RTP

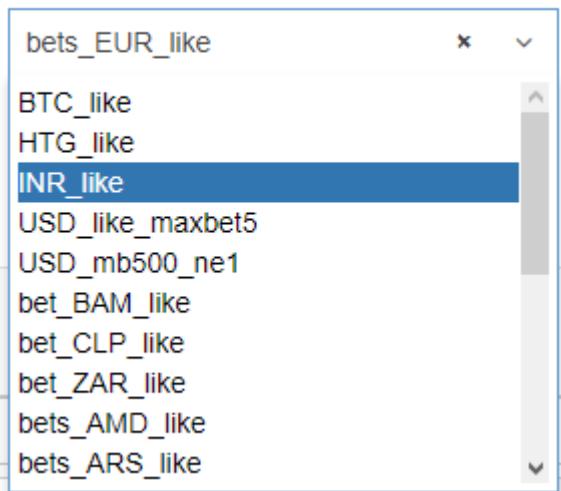

- 5) Denomination - typical bet line settings for currencies (the most common)

Denomination

- 6) Bets - the level of bets. it means "bet level", for example as for the provider NetEnt, which is displayed in the left corner of the screen. This is also used as a multiplier in games from Wazdan and EGT.

Bets

- 7) Language - language directly in the game, which will be written rules and words on the buttons in the slot machine

Language

- 8) Coin Value - coin multiplier for Gaminator and Igrosoft (remnants of the old) choose 100 please for correct work.
 9) Bank on/off - enable or disable restriction of games by banks ([see page 13](#))
 10) MaxWin - ([see page 13](#))
 11) Currency sign - the conditional image of the currency icon inside the game (\$, ₽, €)
 12) Help in games on/off
 13) Widescreen - there is a filling with a game of all free screen space. in order not to lose the original proportions - it is better to use "off" so that the game doesn't stretch out ugly and unnatural if the screen is too wide.
 14) Bank V (Value) - the value of the Bank game ([see page 13](#))
 15) Maxwin V (Value) - the multiplier maximum win on the bet of the player
 16) Save patch
 17) Clear Selection & Clear Patch
 18) the table header duplicates in the columns the symbols from the patch settings interface. as I said before, each game for patch or agent can be customized individually. for example, for a very popular game put a lower value Bank game or RTP
 19) Save patch - duplicated as from the previous item 16

***for a detailed description of the logic, The value of the game Bank and the maximum amount of winnings [see page 13](#)**

Game Bank Value and Max Win

Game Bank Value - a special game return control mode in which each potential win is compared with the current financial condition of each game

MaxWin - a special control mode of the game return, in which each win is limited to a specified value of the maximum win per spin

Set the MaxWin value for the corresponding operating mode. The value must be expressed in monetary terms. (Example: MaxWin = 125.00 means that the Maximum win for one combination will not exceed 125.00 in the currency of your casino, the main group of banks). If you do not use MaxWin mode, leave this value unchanged (any).

Game's bank limit and max win limit.

This mode can be used for:

- limit the win above the specified value per line (in case of MaxWin)
- limit the total amount of wins by start game bank value plus the current amount of money (in case of Game Bank limit)

These parameters influence the game's RTP (return-to-player) in the game, reduce it. RTP reduce is not calculated explicitly, but usually, we are talking about:

- 5-10% RTP reduce using a game bank with start values within the game's average win values (one-time payment for 3-4 older combinations). It's important that the indicated numerals are approximate and may vary by volatility in different games.
- 5-15% RTP reduce using MaxWin. MaxWin limit cuts off the largest payouts in the game. It's important that the indicated numerals are approximate and may vary by volatility in different games.

Principle of operation:

bank	Each game has a bank that accumulates means from every bet and reduced by wins. A game's bank value is an internal parameter of the system. In the case of using the game's bank limit, its value is used to identify if it is possible to pay the win by each spin. <ul style="list-style-type: none">- total game's bank value is less than the amount of payment=the payment can not be made=respin (the process is hidden from the player) It is important that we are talking about the next random spin, not a false non-winning combination.-total game's bank value is more than the payment = payment to the player. In exceptional cases, the game's bank value can be negative. In that case, the game will be "greedy" (it doesn't let the player wins) up to the positive balance (game's bank value can be updated by the administrator)
maxwin	MaxWin parameter limits the maximum win in every spin by its value (is indicated monetary)
bank + maxwin	Combination of two parameters where maxwin and bank check take place. This mode can greatly affect the gameplay if settings are made incorrectly.

General advice on setting up the default parameters in case of their use.

Please note that the Administrator the decision

bank	<ol style="list-style-type: none">1. do not set Default Game Bank Value: = 02. you should not set too high a value (from 2000-5000 Euros or the equivalent in another currency), otherwise, the restriction will be almost not noticeable, or will not work at all3. normal indicators (based on the experience of medium and large customers) in the range from 300 to 1000 Euros, or the equivalent in another currency4. be guided by the amount that you are ready to lose in each game, in the form of a possible win at the initial stage of the project launch5. It is recommended to apply this restriction in games where, according to the rules, very large winnings are possible (multipliers from 10,000 times the initial bet and more)
maxwin	<ol style="list-style-type: none">1. you cannot install = 0, or at least the smallest prize on the line in the game2. it is not recommended to set less than the average payline in the game (as a rule, most of the returns are formed by the average and above-average games, but this principle may be different for games of different volatility)3. it makes no sense to set too high a value that exceeds the maximum line win4. normal values of maxwin (based on the experience of medium and large customers) are slightly less than the largest win on the line, or the next value5. be guided by the amount that you are ready to lose in each game, in the form of a possible win at the initial stage of the project launch
